

The OCTO Contour adjustable back provides a solution for complex disabilities.

It provides support by creating a pelvic girdle, which can be extended to provide thigh laterals to manage adduction and adjusted to seat width required. Thoracic level support is offered with width adjustment easily set.

The Octo back allows segments to be positioned independently on adjusting the 'spine' on the system.

The Octo back can be adjusted to change shape as the user changes shape through growth in height, weight or skeletal change.

The Octo back can be an integral postural management system to include support options such as head rests, foot plates / footbox, harnesses and belts. The Octo back is cross platform compatible on a number of different wheelchairs and mobility bases.

When finding seating solutions we recognise that specialist seat cushions and systems will improve the solution. Amongst others, Versa Inserto - Domino Inserto seat would be appropriate. <http://www.versainsero.com/customisations-domino.html>

PROVIDES SUPPORT FOR COMPLEX DISABILITIES

GROWTH ADJUSTMENT

STANDARD SIZES

COLOUR RANGE

GREY YELLOW
 BLUE PINK
 RED BLACK

The standard sizes are shown to the left, however if required the individual sections can be increased or decreased in size on either side of 80mm sections.

VERSATILE, FLEXIBLE & MANAGES GROWTH

The OCTO back offers wheelchair users a solution for those who require greater comfort and a backrest that will accommodate skeletal issues over time when growth is a major consideration.

Simple to adjust at seating reviews, it allows for additional sections to be added or removed to accommodate and support the changes.

Octo can be adapted to fit a wide range of wheelchairs and mobility bases.
